

Job Description for a Senior CAD for Central Engineering Team for the CEBI Region

Reporting to: Fabrice Dorchies, leader of Central Engineering Team for the CEBI Region

Based in Camfil Levice (Slovakia)

Start Date: 1st January 2017

Introduction

Camfil is the number one air filtration company within Continental Europe and British Isle Region and we have undertaken some new initiatives to grow our overall market share. One of these initiatives is to focus on our Capital Equipment range of products which include Terminal Housings, Safe Change Housings, Fan Filter Units, CamHosp, Camcleaners and other associated products related to Project Sales.

To ensure the success of this initiative there is a clear need to have a centrally located engineering team which will sit independently of any factory and will be tasked with supporting and growing the complete range for the CEBI area. This engineering team will need to be resourced with the correct engineering disciplines to ensure the level of expertise and knowledge to give this the professionalism that is required for such an important range. This team will help co-ordinate with Product Managers, Segment Managers and Key Account Manager to drive sales in this area.

A significant part of products dedicated to Capital Equipment is sub-contracted within Europe and/or produced in our factory in Germany. To ensure a good customization / adaptation of Camfil metal housing's existing range, we recruit for our Camfil European Metal Center entity based in Levice (Slovakia) a Senior CAD.

Mission:

- Lead or participate in development projects, standardization, improvement and reduction of product costs and equipment
- Technically support the commercial action and attend the production.
- Ensure the development project and adapting products and complete technical documentation
- You are the interface between Camfil sisters companies and qualified sub-contractors located in Europe.
- You are in a daily contact with Camfil sisters companies to customize / adapt existing Camfil metal housing range of product based on sub-contractors capacity and know-how.

Position Summary:

- As the Central Engineering Senior CAD,
- You analyze projects requests and decide after discussion with your manager to Go/noGo
- You ensure the consultation for drawings, prices and lead time through our qualified sub-contractors
- You ensure the creation / adaptation of existing products
- You commit on answer delivery time
- You ensure conception in accordance with customers' specification, cost and design rules
- You ensure the quality of documentation (drawings, technical info, production drawings) with regards to sub-contraction or internal production (Camfil Germany mainly)
- You are backed by Camfil R&D Team located in Sweden
- You supervise and manage 1 then 2 junior CADs

- You work in close connection with the production and methods sub-contractors' department
- You ensure industrialization step with assistance of sub-contractors' method
- You participate in the exchange of information between players
- You participate to development of new product
- You answer to customer technical questions

Qualifications / Experience:

Experience and Education in CAD in "fine metal" product development

High level of English to communicate across the Camfil Group

Good SolidWorks knowledge
